

Plastic danger to Marine Life

Every Year Plastic kills 1 million sea birds and 100,000 sea mammals.

Each year 640,000 tonnes of lost and abandoned fishing equipment threatens sea life.

Information

Plastic pollution is devastating for wildlife because it simply can't disappear. It can take hundreds of years to break down into smaller and smaller pieces which can be easily ingested. Plastic is toxic and can kill wildlife or make them more susceptible to disease. Animals can become trapped and injured by plastic and it disrupts habitats, making it hard for some species to live and breed naturally, leading to depletions in populations.
