

# Plastic

Why is plastic harmful to animals?:

Plastic is toxic and can kill wildlife or make them more susceptible to disease

Plastic Waste:

Plastic waste, or plastic pollution, is the accumulation of plastic objects (e.g plastic bottles and much more) in the Earth's environment that adversely affects wildlife, wildlife habitat, and humans.

# No Plastic Is Fantastic!!

Recycling:

Recycling is a big problem in our nowadays world.

Studies show that 91% of plastic isn't recycled properly.

Plastic Degradation:

There are four mechanisms by which plastic degrade in the environment:  
Photodegradation, Thermo Oxidative degradation,  
Hydraulic degradation & Biodegradation by microorganisms
